Overview

The GDM web service API provides a comprehensive set of RESTful methods for accomplishing the following core tasks in the GOBii Genomic Data Management (GDM) system. This manual explains the GDM calls complying BrAPI Genotyping standards and its definitions..

Overview

GOBii's internal documentation explains in detail how the web service infrastructure is architected. It is not necessary for a consumer of the GOBii web API to understand this in great detail. However, knowing a few things about it will make it easier to understand the web method documentation.

Language and Framework

GOBii Web Services are implemented in Java with the Spring framework. Virtually all calls conform to the same basic structure. For example, the `/analyses` POST method is as follows:

```
@RequestMapping(value = "/analyses", method = RequestMethod.POST)
@ResponseBody
public PayloadEnvelope<AnalysisDTO> createAnalysis(@ApiParam(required = true)
@RequestBody PayloadEnvelope<AnalysisDTO> analysisPostEnvelope,
                                                    HttpServletRequest request,
                                                    HttpServletResponse response) {

    PayloadEnvelope<AnalysisDTO> returnVal = new PayloadEnvelope<>();

    // populate returnVal . . .

    return returnVal;
}
```

The request and response are almost always wrapped in a type-parameterized `PayloadEnvelope`. In this case, the `PayloadEnvelope` is type-parameterized for the `AnalysisDTO`. Other methods are type parameterized according to the entity that they touch (e.g., the implementation of the `/datasets` POST method is type-parameterized for the `DataSetDTO`).

The DTO Payload

The DTO objects are lightweight classes that contain simple data properties. They correspond roughly but not exactly to entities in the database (for example, in some cases a DTO defines a child collection of foreign-keyed entities).

For a client of this application, however, the strongly-typed nature of the implementation is irrelevant: all request responses and bodies are conveyed in plain JSON, and it is the application's job to serialize and deserialize accordingly. What a client implementation must take into account, however, is the structure of the DTO that pertains to a specific call. From the reference section for each web method in this document, you can navigate to the DTO definition.

Request/Response Structure

The following illustrates the http body structure encompassed by the PayloadEnvelope. As mentioned above, it is the same for almost all responses as well as for the body of POST and PUT requests.

```
{
  "payload":{
    "linkCollection":{
      "linksPerDataItem":[

      ],
      "exploreLinksPerDataItem":[

      ]
    },
    "data":[

    ]
  },
  "header":{
    "gobiiProcessType":"",
    "dtoHeaderAuth":{
      "userName":null,
      "password":null,
      "token":"",
      "gobiiCropType":""
    },
    "status":{
      "succeeded":true,
      "statusMessages":[

      ],
      "statusMessagesByCode":{

      }
    },
    "pagination":null,
    "gobiiVersion":"2.0_2018-07-31",
    "cropType":""
  }
}
```

For requests, the following keys can be omitted:

- payload.linkCollection
- header

The content of the "data" array will vary depending on how the call is type-parameterized. For example, for a POST to the the /project resource, it will contain a project object, as defined by ProjectDTO.

Authentication

All calls except for /configsettings GET require a valid authentication token. The token can be acquired via a POST to the /auth resource with an empty body and the following request headers set:

- X-Username
- X-Password

The specified header values must, of course, be a valid GOBii username and password. Both values are expected to be unencrypted (https will provide encryption for the overall request stream).

GOBii users must be defined in the system's LDAP and in the GOBii contact table. Accordingly, there can be two types of authentication failures:

- 401 Unauthorized: the user does not authenticate to LDAP;
- 403 Forbidden: the contact record does not exist. In this case, the error will indicate "Missing contact info for user <user-name> in crop database <crop-db>; a contact record must have username = <user-name>";

When authentication succeeds, the response headers will contain an X-Auth-Token key whose value is a valid token. For subsequent requests, it is sufficient to supply X-Auth-Token in the request headers with the token that was received from the /auth POST. Some browsers prevent the client code from reading custom response headers. For such cases, the token value can also be retrieved from the "token" key in the "dtoHeaderAuth" object.

Error Handling

Errors internal to GOBii are reported in the "header" key accompanying the response. An example of how to retrieve error data is provided in the following code fragment.

```

if (!header.getStatus().isSucceeded() ||
    header
        .getStatus()
        .getStatusMessages()
        .stream()
        .filter(headerStatusMessage ->
headerStatusMessage.getGobiiStatusLevel().equals(GobiiStatusLevel.VALIDATION))
        .count() > 0) {
    returnVal = true;
    System.out.println();
    System.out.println("*** Header errors: ");
    for (HeaderStatusMessage currentStatusMessage :
header.getStatus().getStatusMessages()) {
        System.out.println(currentStatusMessage.getMessage());
    }
}
}

```

Paths

Create a new analyses.

POST /gobii/v1/analyses

Description

Create analysis entity for GDM system.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Body	body —		PayloadEnvelopeAnalysisDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeAnalysisDTO

Tags

- Analyses

List all analyses

```
GET /gobii/v1/analyses
```

Description

List of all Analysis entities.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeAnalysisDTO

Tags

- Analyses

Get an analyses by analysesId

```
GET /gobii/v1/analyses/{analysisId}
```

Description

Get analyses by analyses Id.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	analysisId —	ID of Analysis to be extracted.	integer (int32)

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeAnalysisDTO

Tags

- Analyses

Update the analyses by analysisId

```
PUT /gobii/v1/analyses/{analysisId}
```

Description

Updates the Analysis entity having the specified analysisId.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	analysisId —	ID of Analysis to be updated	integer (int32)
Body	body —		PayloadEnvelopeAnalysisDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeAnalysisDTO

Tags

- Analyses

authenticate

```
POST /gobii/v1/auth
```

Description

The user credentials are specified in the request headers X-Username and X-Password; the response and the response headers include the token in the X-Auth-Token header. X-Auth-Token header and value obtained from /auth call will be used as an API-key for the rest of the GDM calls.

Parameters

Type	Name	Description	Schema
Header	X-Password —	User password	string
Header	X-Username —	User Identifier	string
Body	body —		string

Responses

HTTP Code	Description	Schema
200	OK Headers : `X-Auth-Token` (string) : API key to authenticate GDM api calls.	string

Tags

- Authentication

List all configuration settings.

```
GET /gobii/v1/configsettings
```

Description

List all configuration settings. +Provides generic configuration information about the GOBii instances in a given deployment. This call does not require authentication

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeConfigSettingsDTO

Tags

- ConfigSettings

List all contacts from Contacts search

```
GET /gobii/v1/contact-search
```

Description

List contacts for emailid, lastname, firstname, username.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Query	email —		string
Query	firstName —		string
Query	lastName —		string
Query	userName —		string

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeContactDTO

Tags

- Contacts

Create a new contact

POST /gobii/v1/contacts

Description

Create new contact.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Body	body —		PayloadEnvelopeContactDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeContactDTO

Tags

- Contacts

List all contacts

GET /gobii/v1/contacts

Description

List all contacts.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeContactDTO

Tags

- Contacts

Get a contact by contact id

```
GET /gobii/v1/contacts/{contactId}
```

Description

Get contacts by Contact Id.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	contactId —	ID of contacts to be extracted.	integer (int32)

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeContactDTO

Tags

- Contacts

Update a contact by contactId

```
PUT /gobii/v1/contacts/{contactId}
```

Description

Update contact by contact id.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	contactId —	ID of contacts to be updated.	integer (int32)
Body	body —		PayloadEnvelopeContactDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeContactDTO

Tags

- Contacts

Get contact by email id

```
GET /gobii/v1/contacts/{email}
```

Description

Get contact by email id.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	email —	email id of contacts to be extracted.	string

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeContactDTO

Tags

- Contacts

list

```
GET /gobii/v1/cvgroups/{cvGroupId}/cvs
```

Description

List CV terms in CV group with cvGroupId

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	cvGroupId —	ID of the CV group.	integer (int32)

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeCvDTO

Tags

- ControlledVocabularies

Get a CV group by cvGroupId

```
GET /gobii/v1/cvgroups/{cvGroupId}
```

Description

Get CV group by cv group type ID

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

Type	Name	Description	Schema
Path	cvGroupTypeId —	ID of the cv group type	integer (int32)

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeCvGroupDTO

Tags

- ControlledVocabularies

Get a CV group by groupName

```
GET /gobii/v1/cvgroups/{groupName}
```

Description

Get CV group by name

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	groupName —	name of the cv group to be extracted	string
Query	cvGroupTypeId —		integer (int32)

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeCvGroupDTO

Tags

- ControlledVocabularies

Create a new Controlled Vocabulary

POST /gobii/v1/cvs

Description

Creates new cv's.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Body	body —		PayloadEnvelopeCv DTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeCv vDTO

Tags

- [ControlledVocabularies](#)

List all CVs

GET /gobii/v1/cvs

Description

List all cvs in the GDM.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeCvDTO

Tags

- [ControlledVocabularies](#)

Get a CV by cvId

```
GET /gobii/v1/cvs/{cvId}
```

Description

Get cv by the id.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	cvId —	ID of the CV to be extracted	integer (int32)

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeCvDTO

Tags

- [ControlledVocabularies](#)

Update a CV by cvId

```
PUT /gobii/v1/cvs/{cvId}
```

Description

Update cv by cvId.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	cvId —	ID of the CV to be updated	integer (int32)
Body	body —		PayloadEnvelopeCvDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeCvDTO

Tags

- [ControlledVocabularies](#)

Delete a CV by cvId

```
DELETE /gobii/v1/cvs/{cvId}
```

Description

Deletes cv by id.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	cvId —	ID of cv to be deleted	integer (int32)

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeCvDTO

Tags

- ControlledVocabularies

List all CVs in a given groupName

```
GET /gobii/v1/cvs/{groupName}
```

Description

List cvs by the group name.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	groupName —	name of cv group to be extracted	string

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeCvDTO

Tags

- ControlledVocabularies

Create a new dataset

```
POST /gobii/v1/datasets
```

Description

Creates a new dataset in the system.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

Type	Name	Description	Schema
Body	body —		PayloadEnvelopeDataSetDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeDataSetDTO

Tags

- Datasets

List all datasets

```
GET /gobii/v1/datasets
```

Description

List all the existing datasets in the system. The list can be retrieved by page and specific page size.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Query	pageNo —	Retrieve the specified page by number	integer (int32)
Query	pageSize —	Specify the custom page size	integer (int32)
Query	queryId —		string

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeDataSetDTO

Tags

- Datasets

List of types of datasets

```
GET /gobii/v1/datasets/types
```

Description

Lists dataset types in the system.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeNameIdDTO

Tags

- Datasets

Get datasets by type id

```
GET /gobii/v1/datasets/types/{id}
```

Description

Gets the Dataset type by type ID.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	id —	ID of the dataset type	integer (int32)

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeDataSetDTO

Tags

- Datasets

Get dataset by datasetId

```
GET /gobii/v1/datasets/{dataSetId}
```

Description

Gets the Dataset entity having the specified ID.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token	Authentication Token	string
	—		
Path	datasetId	ID of the Dataset to be extracted	integer (int32)
	—		

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeDataSetDTO

Tags

- Datasets

Update/Replace a dataset by datasetId

```
PUT /gobii/v1/datasets/{dataSetId}
```

Description

Updates the Dataset entity having the specified datasetId.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	datasetId —	ID of the Dataset to be updated	integer (int32)
Body	body —		PayloadEnvelopeDataSetDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeDataSetDTO

Tags

- Datasets

List all analyses in a dataset with given datasetId

```
GET /gobii/v1/datasets/{datasetId}/analyses
```

Description

Lists all the analysis in a dataset identified by dataset id.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	datasetId —	ID of the dataset	integer (int32)

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeAnalysisDTO

Tags

- Datasets

List all jobs for a dataset with datasetId

```
GET /gobii/v1/datasets/{datasetId}/jobs
```

Description

List information for active job for a given datasetId

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	datasetId —	ID of the dataset	string

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeJobDTO

Tags

- Datasets

Create a new display

```
POST /gobii/v1/displays
```

Description

Creates displays in GDM.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Body	body —		PayloadEnvelopeDisplayDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeDisplayDTO

Tags

- Displays

List all displays

```
GET /gobii/v1/displays
```

Description

Lists all Displays in GDM

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeDisplayDTO

Tags

- Displays

Get a display by displayId

```
GET /gobii/v1/displays/{displayId}
```

Description

Get the Display by display Id

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token	Authentication Token	string
	—		
Path	displayId	ID of the Display to be extracted	integer (int32)
	—		

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeDisplayDTO

Tags

- Displays

Update a display with displayId

```
PUT /gobii/v1/displays/{displayId}
```

Description

Updates the Display entity having the specified displayId.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token	Authentication Token	string
	—		
Path	displayId	ID of the Display to be updated	integer (int32)
	—		

Type	Name	Description	Schema
Body	body —		PayloadEnvelopeDisplayDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeDisplayDTO

Tags

- Displays

List all entities

```
GET /gobii/v1/entities
```

Description

Lists all the existing entities in the system.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeEntityStatsDTO

Tags

- Entities

Get entity count for a given entity child

```
GET /gobii/v1/entities/{entityNameParent}/{parentId}/{entityNameChild}/count
```

Description

Retrieves the total count of the children for the given entity

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	entityNameChild —	Name of the child entity	string
Path	entityNameParent —	Name of the parent entity	string
Path	parentId —	ID of the parent entity	integer (int32)

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeEntityStatsDTO

Tags

- Entities

Get count for a given entity

```
GET /gobii/v1/entities/{entityName}/count
```

Description

Gets the total Entity count for the given entityName

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	entityName —	Name of the Entity	string

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeEntityStatsDTO

Tags

- Entities

Get last modified date of an entity

```
GET /gobii/v1/entities/{entityName}/lastmodified
```

Description

Gets last modified Entity for the given entityName

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	entityName —	Name of the Entity	string

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeEntityStatsDTO

Tags

- Entities

Create a new experiment

```
POST /gobii/v1/experiments
```

Description

Creates a new experiment in the system.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Body	body —		PayloadEnvelopeExperimentDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeExperimentDTO

Tags

- Experiments

List all experiments

```
GET /gobii/v1/experiments
```

Description

List all the existing experiments in the system.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeExperimentDTO

Tags

- Experiments

Get a experiment by experimentId

```
GET /gobii/v1/experiments/{experimentId}
```

Description

Gets the Experiment entity having the specified ID.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	experimentId —	ID of the Experiment to be updated	integer (int32)

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeExperimentDTO

Tags

- Experiments

Update an experiment by experimentId

```
PUT /gobii/v1/experiments/{experimentId}
```

Description

Updates the Experiment entity having the specified experimentId.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

Type	Name	Description	Schema
Path	experimentId —	ID of the Experiment to be updated	integer (int32)
Body	body —		PayloadEnvelopeExperimentDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeExperimentDTO

Tags

- Experiments

List all protocols for a given experimentId

```
GET /gobii/v1/experiments/{experimentId}/protocols
```

Description

Retrieves all the protocols having the specified experimentId in the system.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	experimentId —	ID of the Experiment	integer (int32)

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeProtocolDTO

Tags

- Experiments

List of loader files in a given directory

```
GET /gobii/v1/files/loader/{directoryName}
```

Description

Gets file preview for the specified directory name

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	directoryName —	Name of the directory	string
Query	fileFormat —	Format/Extension of the file	string

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeLoaderFilePreview DTO

Tags

- Files

Add a loader file to given directory

```
PUT /gobii/v1/files/loader/{directoryName}
```

Description

Updates a directory in the system that will be used for storing the data files for loading

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

Type	Name	Description	Schema
Path	directoryName	Name of the directory/folder	string
Body	body		PayloadEnvelopeLoaderFilePreviewDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeLoaderFilePreviewDTO

Tags

- Files

Upload a file to given destination

```
POST /gobii/v1/files/{destinationType}
```

Description

Uploads an arbitrary file to the specified destination

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token	Authentication Token	string
Path	destinationType	Destination type where the file will be uploaded to	string
Query	file	The file to be uploaded	string
Query	fileName	Name of the file to be uploaded	string

Responses

HTTP Code	Description	Schema
200	successful operation	string

Tags

- Files

Delete a file by destination type

```
DELETE /gobii/v1/files/{destinationType}
```

Description

Deletes an arbitrary file from the specified destination

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	destinationType —	Destination type where the file will be delete from	string
Query	fileName —	Name of the file to be deleted	string

Responses

HTTP Code	Description	Schema
200	successful operation	string

Produces

- `text/plain`

Tags

- Files

Upload a file for a given job and destination type

```
POST /gobii/v1/files/{gobiiJobId}/{destinationType}
```

Description

Uploads the specified file for a specific job to the specified directory

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	destinationType —	Destination type where the file will be uploaded to	string
Path	gobiiJobId —	ID of the Job that the file will be associated to	string
Query	file —	The file to be uploaded	string
Query	fileName —	Name of the file	string

Responses

HTTP Code	Description	Schema
200	successful operation	string

Tags

- Files

Download a job file from a given destination type

```
GET /gobii/v1/files/{gobiiJobId}/{destinationType}
```

Description

Downloads the specified file for a specific job from the specified directory

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	destinationType —	Destination type where the file will be downloaded from	string

Type	Name	Description	Schema
Path	gobiiJobId —	ID of the Job	string
Query	fileName —	Name of the file to be downloaded	string

Responses

HTTP Code	Description	Schema
200	successful operation	InputStreamResource

Tags

- Files

Create an extractor instruction file

```
POST /gobii/v1/instructions/extractor
```

Description

Creates extractor instruction file and then submits a new Job.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Body	body —		PayloadEnvelopeExtractorInstructionFilesDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeExtractorInstructionFilesDTO

Tags

- Instructions

Get extractor job status by jobName

```
GET /gobii/v1/instructions/extractor/jobs/{jobName}
```

Description

Retrieves the extract job status along with other job details having the specified Job Name.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token	Authentication Token	string
	—		
Path	jobName	Name of the job	string
	—		

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeJobDTO

Tags

- Instructions

Download an extractor instructor file

```
GET /gobii/v1/instructions/extractor/{instructionFileName}
```

Description

Retrieves the extractor instruction file entity having the specified instruction file name.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token	Authentication Token	string
	—		
Path	instructionFileName	Name of the instruction file to be retrieved	string
	—		

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeExtractorInstructionFilesDTO

Tags

- Instructions

Create loader instruction file

```
POST /gobii/v1/instructions/loader
```

Description

Creates loader instruction file and then submits a new Job.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Body	body —		PayloadEnvelopeLoaderInstructionFilesDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeLoaderInstructionFilesDTO

Tags

- Instructions

Get loader job status by job name

```
GET /gobii/v1/instructions/loader/jobs/{jobName}
```

Description

Gets the loading job status along with other job details having the specified Job Name.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token	Authentication Token	string
	—		
Path	jobName	Name of the job	string
	—		

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeJobDTO

Tags

- Instructions

Get a loader instruction file

```
GET /gobii/v1/instructions/loader/{instructionFileName}
```

Description

Gets the loader instruction file entity having the specified instruction file name.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token	Authentication Token	string
	—		
Path	instructionFileName	Name of the instruction file to be retrieved.	string
	—		

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeLoaderInstructionFilesDTO

Tags

- Instructions

Create a new job

POST /gobii/v1/jobs

Description

Creates a new job in the system.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Body	body —		PayloadEnvelopeJobDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeJobDTO

Tags

- Jobs

List all jobs

GET /gobii/v1/jobs

Description

Lists all the existing jobs in the system.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeJobDTO

Tags

- Jobs

Create DNA samples for a given job

```
POST /gobii/v1/jobs/dnasamples/{jobName}
```

Description

Creates DNA samples for a given Job having the specified name in the system.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	jobName —	Name of the Job that the DNA samples will be added to	string
Body	body —		PayloadEnvelopeDnaSampleDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeJobDTO

Tags

- Jobs

Get job details by job name

```
GET /gobii/v1/jobs/{jobName}
```

Description

Gets the Job entity having the specified name.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token	Authentication Token	string
	—		
Path	jobName	Name of the Job to be extracted	string
	—		

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeJobDTO

Tags

- Jobs

Update a job by jobName

```
PUT /gobii/v1/jobs/{jobName}
```

Description

Updates the Job entity having the specified jobName.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token	Authentication Token	string
	—		
Path	jobName	Name of the Job to be updated	string
	—		

Type	Name	Description	Schema
Body	body —		PayloadEnvelopeJobDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeJobDTO

Tags

- Jobs

Create a manifest

POST /gobii/v1/manifests

Description

Creates a Manifest entity for GOBii system.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Body	body —		PayloadEnvelopeManifestDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeManifestDTO

Tags

- Manifests

List all manifests

```
GET /gobii/v1/manifests
```

Description

Lists an unfiltered list of all Manifest entities.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeManifestDTO

Tags

- Manifests

Get manifests by manifestId

```
GET /gobii/v1/manifests/{manifestId}
```

Description

Gets the Manifest entity having the specified ID.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	manifestId —	ID of the Manifest to be retrieved	integer (int32)

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeManifestDTO

Tags

- Manifests

Update a manifest

```
PUT /gobii/v1/manifests/{manifestId}
```

Description

Updates the Manifest entity having the specified manifestId.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	manifestId —	ID of the Manifest to be updated	integer (int32)
Body	body —		PayloadEnvelopeManifestDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeManifestDTO

Tags

- Manifests

List all mapsets

```
GET /gobii/v1/maps
```

Description

Lists all the existing Mapsets in the system.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeMapsetDTO

Tags

- Maps

Create a new Mapset

POST /gobii/v1/mapsets

Description

Creates a new mapset in the system.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Body	body —		PayloadEnvelopeMapsetDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeMapsetDTO

Tags

- Maps

List all mapsets

```
GET /gobii/v1/mapsets
```

Description

List all the existing mapsets in the system.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelope MapsetDTO

Tags

- Maps

Get mapsets by mapsetId

```
GET /gobii/v1/mapsets/{mapsetId}
```

Description

Gets the Mapset entity having the specified ID.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	mapsetId —	ID of the Mapset to be extracted	integer (int32)

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeMapsetDTO

Tags

- Maps

Update a mapset by mapsetId

```
PUT /gobii/v1/mapsets/{mapsetId}
```

Description

Updates the Mapset entity having the specified mapsetId.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	mapsetId —	ID of the Mapset to be updated	integer (int32)
Body	body —		PayloadEnvelopeMapsetDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeMapsetDTO

Tags

- Maps

List all markers from markers search

```
GET /gobii/v1/marker-search
```

Description

List Marker search results.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Query	name —	Name of the marker	string

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeMarkerDTO

Tags

- Markers

Create a new Marker group

POST /gobii/v1/markergroups

Description

Creates a new marker group in the system.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Body	body —		PayloadEnvelopeMarkerGroupDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeMarkerGroupDTO

Tags

- Markers

List all markergroups

```
GET /gobii/v1/markergroups
```

Description

Lists all the existing marker groups in the system.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelope MarkerGroupDTO

Tags

- Markers

Gets all markers in a given markergroup

```
GET /gobii/v1/markergroups/{markerGroupId}
```

Description

Retrieves the Marker Group entity having the specified ID.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

Type	Name	Description	Schema
Path	markerGroupId —	ID of the marker group to be updated	integer (int32)

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeMarkerGroupDTO

Tags

- Markers

Update a marker by markergroupId

```
PUT /gobii/v1/markergroups/{markerGroupId}
```

Description

Updates the Marker Group entity having the specified markerGroupId.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	markerGroupId —	ID of the Marker Group to be updated	integer (int32)
Body	body —		PayloadEnvelopeMarkerGroupDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeMarkerGroupDTO

Tags

- Markers

Create a new marker

POST /gobii/v1/markers

Description

Creates a new marker in the system.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Body	body —		PayloadEnvelopeMarkerDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeMarkerDTO

Tags

- Markers

List all markers

GET /gobii/v1/markers

Description

Lists all the existing markers in the system.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeMarkerDTO

Tags

- Markers

Get a marker by markerId

```
GET /gobii/v1/markers/{markerId}
```

Description

Retrieves the Marker entity having the specified ID.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	markerId —	ID of the Marker to be extracted	integer (int32)

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeMarkerDTO

Tags

- Markers

Update a marker by markerId

```
PUT /gobii/v1/markers/{markerId}
```

Description

Updates the Marker entity having the specified markerId.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	markerId —	ID of the Marker to be updated	integer (int32)
Body	body —		PayloadEnvelopeMarkerDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeMarkerDTO

Tags

- Markers

Create a new NameID

```
POST /gobii/v1/names/{entity}
```

Description

Retrieves a list of name/ID combination for a given entity and name list. For the list of entities supported see class GobiiEntityType. This service is specifically implemented for these filter types: NAMES_BY_NAME_LIST - given a list of names, return the same list with the corresponding ID in the database. If name doesn't exist, ID will be 0. NAMES_BY_NAME_LIST_RETURN_EXISTS - given a list of names, return the list of names with ID that exists in the database. NAMES_BY_NAME_LIST_RETURN_ABSENT - given a list of names, return the list of names that doesn't exist in the database with 0 as the ID. Filter value varies per entity. This can be cv group name, project ID, platform ID, etc. Example use case: entity = CV; filterType = NAMES_BY_NAME_LIST; filterValue = germplasm_typeResult will be a list of CV terms with ID having germplasm_type as the cv group

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	entity —	The entity to be retrieved	string

Type	Name	Description	Schema
Query	filterType —	The filter type for the name list	string
Query	filterValue —	The value for the filter type	string
Body	body —		PayloadEnvelopeNameIdDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeNameIdDTO

Tags

- Names

List all NameIds

```
GET /gobii/v1/names/{entity}
```

Description

List of name/ID combination for a given entity. For the list of entities supported see class GobiiEntityType. List can further be filtered out by specifying the filter type and value. For the list of filter types supported see class GobiiFilterType. Example use case: entity = CV; filterType = NAMES_BY_TYPE_NAME; filterValue = statusResult will be a list of CV terms having status as the cv group

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	entity —	The entity to be retrieved	string
Query	filterType —	The filter type for the name list	string
Query	filterValue —	The value for the filter type	string

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeNameIdDTO

Tags

- Names

Create a new organization

POST /gobii/v1/organizations

Description

Creates a new organization in the system.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Body	body —		PayloadEnvelopeOrganizationDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeOrganizationDTO

Tags

- Organizations

List all organizations

GET /gobii/v1/organizations

Description

List all the existing organizations in the system.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeOrganizationDTO

Tags

- Organizations

Get organization by organizationId

```
GET /gobii/v1/organizations/{organizationId}
```

Description

Retrieves the Organization entity having the specified ID.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	organizationId —	ID of the Organization to be extracted	integer (int32)

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeOrganizationDTO

Tags

- Organizations

Update an organization by organizationId

```
PUT /gobii/v1/organizations/{organizationId}
```

Description

Updates the Organization entity having the specified organizationId.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	organizationId —	ID of the Organization to be updated	integer (int32)
Body	body —		PayloadEnvelopeOrganizationDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeOrganizationDTO

Tags

- Organizations

ping

```
POST /gobii/v1/ping
```

Description

Pings the GDB Web server.

Parameters

Type	Name	Schema
Body	body —	PayloadEnvelopePingDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopePingDTO

Tags

- Ping

Create a new platform

POST /gobii/v1/platforms

Description

Creates a new Platform in the system.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Body	body —		PayloadEnvelopePlatformDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopePlatformDTO

Tags

- Platforms

List all platforms

```
GET /gobii/v1/platforms
```

Description

List all the existing platforms in the system.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopePlatformDTO

Tags

- Platforms

GET /platforms/protocols/{vendorProtocolId}

```
GET /gobii/v1/platforms/protocols/{vendorProtocolId}
```

Description

Gets the Platform entity having the specified Vendor Protocol ID.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	vendorProtocolId —	ID of the vendor protocol	integer (int32)

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopePlatformDTO

Tags

- Platforms

Get a platform by platformId

```
GET /gobii/v1/platforms/{platformId}
```

Description

Retrieves the Platform entity having the specified ID.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token	Authentication Token	string
	—		
Path	platformId	ID of the Platform to be extracted	integer (int32)
	—		

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopePlatformDTO

Tags

- Platforms

Update a platform by platformId

```
PUT /gobii/v1/platforms/{platformId}
```

Description

Updates the Platform entity having the specified platformId.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	platformId —	ID of the Platform to be updated	integer (int32)
Body	body —		PayloadEnvelopePlatformDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopePlatformDTO

Tags

- Platforms

Create a new project

```
POST /gobii/v1/projects
```

Description

Creates a new project in the system.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Body	body —		PayloadEnvelopeProjectDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeProjectDTO

Tags

- Projects

List all projects

```
GET /gobii/v1/projects
```

Description

List all the existing projects in the system.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeProjectDTO

Tags

- Projects

Get a project by projectId

```
GET /gobii/v1/projects/{projectId}
```

Description

Retrieves the Project entity having the specified ID.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	projectId —	ID of the Project to be extracted	integer (int32)

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeProjectDTO

Tags

- Projects

Update a project by projectId

```
PUT /gobii/v1/projects/{projectId}
```

Description

Updates the Project entity having the specified projectId.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	projectId —	ID of the Project to be updated	integer (int32)
Body	body —		PayloadEnvelopeProjectDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeProjectDTO

Tags

- Projects

Create a new protocol

POST /gobii/v1/protocols

Description

Creates a new Protocol in the system.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Body	body —		PayloadEnvelopeProtocolDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeProtocolDTO

Tags

- Protocols

List all protocols

GET /gobii/v1/protocols

Description

List all the existing protocols in the system.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeProtocolDTO

Tags

- Protocols

Get a protocol by protocolId

```
GET /gobii/v1/protocols/{protocolId}
```

Description

Retrieves the Protocol entity having the specified ID.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token	Authentication Token	string
	—		
Path	protocolId	ID of the Protocol to be extracted	integer (int32)
	—		

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeProtocolDTO

Tags

- Protocols

Update a protocol by protocolId

```
PUT /gobii/v1/protocols/{protocolId}
```

Description

Updates the Protocol entity having the specified protocolId.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	protocolId —	ID of the Protocol to be updated	integer (int32)
Body	body —		PayloadEnvelopeProtocolDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeProtocolDTO

Tags

- Protocols

Create new vendors for a given protocolId

```
POST /gobii/v1/protocols/{protocolId}/vendors
```

Description

Creates a new Vendor Protocol in the system for specified Protocol ID.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	protocolId —	ID of the Protocol	integer (int32)
Body	body —		PayloadEnvelopeOrganizationDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeOrganizationDTO

Tags

- Protocols.vendor

List all vendors for a given protocolId

```
GET /gobii/v1/protocols/{protocolId}/vendors
```

Description

List all the vendor protocols given protocolId in the system.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	protocolId —	ID of the Protocol ID	integer (int32)

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeOrganizationDTO

Tags

- Protocols

Update vendors for a given protocolId

```
PUT /gobii/v1/protocols/{protocolId}/vendors
```

Description

Updates the Vendor Protocol entity having the specified protocolId.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	protocolId —	ID of the Protocol	integer (int32)
Body	body —		PayloadEnvelopeOrganizationDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeOrganizationDTO

Tags

- Protocols

Create a new reference

```
POST /gobii/v1/references
```

Description

Creates a new reference in the system.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Body	body —		PayloadEnvelopeReferenceDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeReferenceDTO

Tags

- References

List all references

```
GET /gobii/v1/references
```

Description

Lists all the existing references in the system.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeReferenceDTO

Tags

- References

GET /references/{referenceId}

```
GET /gobii/v1/references/{referenceId}
```

Description

Gets the Reference entity having the specified ID.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	referenceId —	ID of the Reference to be extracted	integer (int32)

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeReferenceDTO

Tags

- References

Update a reference by referenceId

```
PUT /gobii/v1/references/{referenceId}
```

Description

Updates the Reference entity having the specified referenceId.

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	referenceId —	ID of the Reference to be updated	integer (int32)
Body	body —		PayloadEnvelopeReferenceDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeReferenceDTO

Tags

- References

/restprofiles/

PUT /gobii/v1/restprofiles

Description

Update REST profiles When the Header of the payload envelope for a resource contains maxGet, maxPost, and maxPut values, this resource provides a means to update the max for a given rest resource ID and for a given HTTP verb. The values are transient in the sense that they will be confined only to a specific web service deployment. They are stored in the web service configurationdocument

Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Body	body —		PayloadEnvelopeRestProfileDTO

Responses

HTTP Code	Description	Schema
200	successful operation	PayloadEnvelopeRestProfileDTO

Tags

- RestProfiles
