# Overview

The GDM web service API provides a comprehensive set of RESTful methods for accomplishing the following core tasks in the GOBii Genomic Data Management (GDM) system. This manual explains the GDM web architecture and its web service operations.

## Overview

GOBii's internal documentation explains in detail how the web service infrastructure is architected. It is not necessary for a consumer of the GOBii web API to understand this in great detail. However, knowing a few things about it will make it easier to understand the web method documentation.

## Language and Framework

GOBii Web Services are implemented in Java with the Spring framework. Virtually all calls conform to the same basic structure. For example, the `/analyses` POST method is as follows:

```
@RequestMapping(value = "/analyses", method = RequestMethod.POST)
@ResponseBody
public PayloadEnvelope<AnalysisDTO> createAnalysis(@ApiParam(required = true)
@RequestBody PayloadEnvelope<AnalysisDTO> analysisPostEnvelope,
                                                    HttpServletRequest request,
                                                    HttpServletResponse response) {

    PayloadEnvelope<AnalysisDTO> returnVal = new PayloadEnvelope<>();

    // populate returnVal . . .

    return returnVal;
}
```

The request and response are almost always wrapped in a type-parameterized `PayloadEnvelope`. In this case, the `PayloadEnvelope` is type-parameterized for the `AnalysisDTO`. Other methods are type parameterized according to the entity that they touch (e.g., the implementation of the `/datasets` POST method is type-parameterized for the `DataSetDTO`).

## The DTO Payload

The DTO objects are lightweight classes that contain simple data properties. They correspond

roughly but not exactly to entities in the database (for example, in some cases a DTO defines a child collection of foreign-keyed entities).

For a client of this application, however, the strongly-typed nature of the implementation is irrelevant: all request responses and bodies are conveyed in plain JSON, and it is the application's job to serialize and deserialize accordingly. What a client implementation must take into account, however, is the structure of the DTO that pertains to a specific call. From the reference section for each web method in this document, you can navigate to the DTO definition.

## Request/Response Structure

The following illustrates the http body structure encompassed by the `PayloadEnvelope`. As mentioned above, it is the same for almost all responses as well as for the body of POST and PUT requests.

```

{
  "payload":{
    "linkCollection":{
      "linksPerDataItem":[

      ],
      "exploreLinksPerDataItem":[

      ]
    },
    "data":[

    ]
  },
  "header":{
    "gobiiProcessType":"",
    "dtoHeaderAuth":{
      "userName":null,
      "password":null,
      "token":"",
      "gobiiCropType":""
    },
    "status":{
      "succeeded":true,
      "statusMessages":[

      ],
      "statusMessagesByCode":{

      }
    },
    "pagination":null,
    "gobiiVersion":"2.0_2018-07-31",
    "cropType":""
  }
}

```

For requests, the following keys can be omitted:

- payload.linkCollection
- header

The content of the "data" array will vary depending on how the call is type-parameterized. For example, for a POST to the the /project resource, it will contain a project object, as defined by ProjectDTO.

# Authentication

All calls except for /configsettings GET require a valid authentication token. The token can be acquired via a POST to the /auth resource with an empty body and the following request headers set:

- X-Username
- X-Password

The specified header values must, of course, be a valid GOBii username and password. Both values are expected to be unencrypted (https will provide encryption for the overall request stream).

GOBii users must be defined in the system's LDAP and in the GOBii contact table. Accordingly, there can be two types of authentication failures:

- 401 Unauthorized: the user does not authenticate to LDAP;
- 403 Forbidden: the contact record does not exist. In this case, the error will indicate "Missing contact info for user <user-name> in crop database <crop-db>; a contact record must have username = <user-name>";

When authentication succeeds, the response headers will contain an X-Auth-Token key whose value is a valid token. For subsequent requests, it is sufficient to supply X-Auth-Token in the request headers with the token that was received from the /auth POST. Some browsers prevent the client code from reading custom response headers. For such cases, the token value can also be retrieved from the "token" key in the "dtoHeaderAuth" object.

## Error Handling

Errors internal to GOBii are reported in the "header" key accompanying the response. An example of how to retrieve error data is provided in the following code fragment.

```
if (!header.getStatus().isSucceeded() ||
    header
        .getStatus()
        .getStatusMessages()
        .stream()
        .filter(headerStatusMessage ->
headerStatusMessage.getGobiiStatusLevel().equals(GobiiStatusLevel.VALIDATION))
        .count() > 0) {
    returnVal = true;
    System.out.println();
    System.out.println("*** Header errors: ");
    for (HeaderStatusMessage currentStatusMesage :
header.getStatus().getStatusMessages()) {
        System.out.println(currentStatusMesage.getMessage());
    }
}
```

# Paths

## Get Allele Matrices

```
GET /brapi/v1/allelematrices
```

### Description

Get allele matrices by given study db id

### Parameters

Type	Name	Description	Schema
Query	<b>studyDbId</b> —	Study DB Id	string

### Responses

HTTP Code	Description	Schema
200	successful operation	string

### Produces

- `application/json`

### Tags

- BrAPI

## Search Allele Matrix

```
POST /brapi/v1/allelematrix-search
```

### Description

Search allele matrix using marker profiles

### Parameters

Type	Name	Description	Schema
Query	<b>markerprofile</b> DbId —	Marker Profile Id	string
Query	<b>matrixDbId</b> —	Matrix DB Id	string

## Responses

HTTP Code	Description	Schema
200	successful operation	string

## Produces

- `application/json`

## Tags

- BrAPI

# Search Allele Matrix

GET /brapi/v1/allelematrix-search

## Description

Search allele matrix using marker profiles

## Parameters

Type	Name	Description	Schema
Query	<b>markerprofile</b> DbId —	Marker Profile Id	string
Query	<b>matrixDbId</b> —	Matrix DB Id	string

## Responses

HTTP Code	Description	Schema
200	successful operation	string

## Produces

- `application/json`

## Tags

- BrAPI

# Get Allele Matrix Job status

```
GET /brapi/v1/allelematrix-search/status/{jobId}
```

## Description

Get allele matrix Job status

## Parameters

Type	Name	Description	Schema
Path	jobId —	Job Id	string

## Responses

HTTP Code	Description	Schema
200	successful operation	string

## Produces

- `application/json`

## Tags

- BrAPI

# List all calls.

```
GET /brapi/v1/calls
```

## Description

List all calls

## Responses

HTTP Code	Description	Schema
200	successful operation	string

## Produces

- `application/json`

## Tags

- BrAPI

# List all files

```
GET /brapi/v1/files
```

## Description

List all the files in a given path.

## Parameters

Type	Name	Description	Schema
Query	<code>fqp</code> —	Fully qualified path name	string

## Responses

HTTP Code	Description	Schema
default	successful operation	No Content

## Produces

- `application/octet-stream`

## Tags

- BrAPI

# Get germplasm by study db id.

```
GET /brapi/v1/germplasm/{studyDbId}
```

## Description

Get germplasm by study db id.

## Parameters

Type	Name	Description	Schema
Path	<b>studyDbId</b> —	Study DB Id	integer (int32)

## Responses

HTTP Code	Description	Schema
200	successful operation	string

## Produces

- `application/json`

## Tags

- BrAPI

# List all Marker Profiles

```
POST /brapi/v1/markerprofiles
```

## Description

List all Marker Profiles in given germplasm db..

## Parameters

Type	Name	Description	Schema
Query	<b>germplasmDbId</b> —	Germplasm DB Id	string

## Responses

HTTP Code	Description	Schema
200	successful operation	string

## Produces

- `application/json`

## Tags

- BrAPI

# List all Marker Profiles

GET /brapi/v1/markerprofiles

## Description

List all Marker Profiles in given germplasm db..

## Parameters

Type	Name	Description	Schema
Query	germplasmDb Id —	Germplasm DB Id	string

## Responses

HTTP Code	Description	Schema
200	successful operation	string

## Produces

- `application/json`

## Tags

- BrAPI

# Search the studies.

POST /brapi/v1/studies-search

## Description

Search studies.

## Parameters

Type	Name	Schema
Body	<b>body</b> —	string

## Responses

HTTP Code	Description	Schema
200	successful operation	string

## Produces

- `application/json`

## Tags

- BrAPI

# List all observation variables for given study db id

```
GET /brapi/v1/studies/{studyDbId}/observationVariables
```

## Description

List all observation variables for given study db id

## Parameters

Type	Name	Description	Schema
Path	<b>studyDbId</b> —	Study DB Id	integer (int32)

## Responses

HTTP Code	Description	Schema
200	successful operation	string

## Produces

- `application/json`

## Tags

- BrAPI

## List all tokens.

POST /brapi/v1/token

## Description

List all tokens

## Parameters

Type	Name	Schema
Body	body —	string

## Responses

HTTP Code	Description	Schema
200	successful operation	string

## Produces

- `application/json`

## Tags

- BrAPI

## Create a new analyses.

POST /gobii/v1/analyses

## Description

Create analysis entity for GDM system.

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Body	body —		<a href="#">PayloadEnvelopeAnalysisDTO</a>

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeAnalysisDTO</a>

## Tags

- Analyses

# List all analyses

```
GET /gobii/v1/analyses
```

## Description

List of all Analysis entities.

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeAnalysisDTO</a>

## Tags

- Analyses

# Get an analyses by analysisId

```
GET /gobii/v1/analyses/{analysisId}
```

## Description

Get analyses by analyses Id.

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token	Authentication Token	string
	—		
Path	analysisId	ID of Analysis to be extracted.	integer (int32)
	—		

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeAnalysisDTO</a>

## Tags

- Analyses

# Update the analyses by analysisId

```
PUT /gobii/v1/analyses/{analysisId}
```

## Description

Updates the Analysis entity having the specified analysisId.

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token	Authentication Token	string
	—		
Path	analysisId	ID of Analysis to be updated	integer (int32)
	—		

Type	Name	Description	Schema
Body	body —		<a href="#">PayloadEnvelopeAnalysisDTO</a>

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeAnalysisDTO</a>

## Tags

- Analyses

# authenticate

POST /gobii/v1/auth

## Description

The user credentials are specified in the request headers X-Username and X-Password; the response and the response headers include the token in the X-Auth-Token header. X-Auth-Token header and value obtained from /auth call will be used as an API-key for the rest of the GDM calls.

## Parameters

Type	Name	Description	Schema
Header	X-Password —	User password	string
Header	X-Username —	User Identifier	string
Body	body —		string

## Responses

HTTP Code	Description	Schema
200	OK Headers : `X-Auth-Token` (string) : API key to authenticate GDM api calls.	string

## Tags

- Authentication

## List all configuration settings.

```
GET /gobii/v1/configsettings
```

### Description

List all configuration settings. +Provides generic configuration information about the GOBii instances in a given deployment. This call does not require authentication

### Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

### Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeConfigSettingsDTO</a>

## Tags

- ConfigSettings

## List all contacts from Contacts search

```
GET /gobii/v1/contact-search
```

### Description

List contacts for emailid, lastname, firstname, username.

### Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

Type	Name	Description	Schema
Query	<b>email</b> —	contact's email	string
Query	<b>firstName</b> —	contact's first name	string
Query	<b>lastName</b> —	contact's last name	string
Query	<b>userName</b> —	contact's user name	string

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeContactDTO</a>

## Tags

- Contacts

# Create a new contact

POST /gobii/v1/contacts

## Description

Create new contact.

## Parameters

Type	Name	Description	Schema
Header	<b>X-Auth-Token</b> —	Authentication Token	string
Body	<b>body</b> —		<a href="#">PayloadEnvelopeContactDTO</a>

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeContactDTO</a>

## Tags

- Contacts

## List all contacts

```
GET /gobii/v1/contacts
```

### Description

List all contacts.

### Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

### Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeContactDTO</a>

## Tags

- Contacts

## Get a contact by contact id

```
GET /gobii/v1/contacts/{contactId}
```

### Description

Get contacts by Contact Id.

### Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	contactId —	ID of contacts to be extracted.	integer (int32)

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeContactDTO</a>

## Tags

- Contacts

# Update a contact by contactId

```
PUT /gobii/v1/contacts/{contactId}
```

## Description

Update contact by contact id.

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	contactId —	ID of contacts to be updated.	integer (int32)
Body	body —		<a href="#">PayloadEnvelopeContactDTO</a>

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeContactDTO</a>

## Tags

- Contacts

# Get contact by email id

```
GET /gobii/v1/contacts/{email}
```

## Description

Get contact by email id.

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	email —	email id of contacts to be extracted.	string

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeContactDTO</a>

## Tags

- Contacts

## list

```
GET /gobii/v1/cvgroups/{cvGroupId}/cvs
```

## Description

List CV terms in CV group with cvGroupId

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	cvGroupId —	ID of the CV group.	integer (int32)

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeCVDTO</a>

## Tags

- ControlledVocabularies

## Get a CV group by cvGroupId

```
GET /gobii/v1/cvgroups/{cvGroupId}
```

### Description

Get CV group by cv group type ID

### Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	cvGroupId —	ID of the cv group type	integer (int32)

### Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeCVGroupDTO</a>

## Tags

- ControlledVocabularies

## Get a CV group by groupName

```
GET /gobii/v1/cvgroups/{groupName}
```

### Description

Get CV group by name

### Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	groupName —	name of the cv group to be extracted	string
Query	cvGroupTypeId —		integer (int32)

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeCvGroupDTO</a>

## Tags

- [ControlledVocabularies](#)

# Create a new Controlled Vocabulary

POST /gobii/v1/cvs

## Description

Creates new cv's.

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Body	body —		<a href="#">PayloadEnvelopeCvDTO</a>

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeCvDTO</a>

## Tags

- ControlledVocabularies

## List all CVs

```
GET /gobii/v1/cvs
```

### Description

List all cvs in the GDM.

### Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

### Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeCvDTO</a>

## Tags

- ControlledVocabularies

## Get a CV by cvId

```
GET /gobii/v1/cvs/{cvId}
```

### Description

Get cv by the id.

### Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	cvId —	ID of the CV to be extracted	integer (int32)

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeCvDTO</a>

## Tags

- ControlledVocabularies

## Update a CV by cvId

```
PUT /gobii/v1/cvs/{cvId}
```

### Description

Update cv by cvId.

### Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	cvId —	ID of the CV to be updated	integer (int32)
Body	body —		<a href="#">PayloadEnvelopeCvDTO</a>

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeCvDTO</a>

## Tags

- ControlledVocabularies

## Delete a CV by cvId

```
DELETE /gobii/v1/cvs/{cvId}
```

## Description

Deletes cv by id.

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token	Authentication Token	string
	—		
Path	cvId	ID of cv to be deleted	integer (int32)
	—		

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeCvDTO</a>

## Tags

- ControlledVocabularies

## List all CVs in a given groupName

```
GET /gobii/v1/cvs/{groupName}
```

## Description

List cvs by the group name.

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token	Authentication Token	string
	—		
Path	groupName	name of cv group to be extracted	string
	—		

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeCvDTO</a>

## Tags

## Create a new dataset

POST /gobii/v1/datasets

### Description

Creates a new dataset in the system.

### Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Body	body —		<a href="#">PayloadEnvelopeDataSetDTO</a>

### Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeDataSetDTO</a>

## Tags

- Datasets

## List all datasets

GET /gobii/v1/datasets

### Description

List all the existing datasets in the system. The list can be retrieved by page and specific page size.

### Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

Type	Name	Description	Schema
Query	<b>pageNo</b> —	Retrieve the specified page by number	integer (int32)
Query	<b>pageSize</b> —	Specify the custom page size	integer (int32)
Query	<b>queryId</b> —		string

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeDataSetDTO</a>

## Tags

- Datasets

# List of types of datasets

GET /gobii/v1/datasets/types

## Description

Lists dataset types in the system.

## Parameters

Type	Name	Description	Schema
Header	<b>X-Auth-Token</b> —	Authentication Token	string

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeNameIdDTO</a>

## Tags

- Datasets

# Get datasets by type id

```
GET /gobii/v1/datasets/types/{id}
```

## Description

Gets the Dataset type by type ID.

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token	Authentication Token	string
	—		
Path	id	ID of the dataset type	integer (int32)
	—		

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeDataSetDTO</a>

## Tags

- Datasets

# Get dataset by datasetId

```
GET /gobii/v1/datasets/{dataSetId}
```

## Description

Gets the Dataset entity having the specified ID.

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token	Authentication Token	string
	—		
Path	dataSetId	ID of the Dataset to be extracted	integer (int32)
	—		

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeDataSetDTO</a>

## Tags

- Datasets

## Update/Replace a dataset by datasetId

```
PUT /gobii/v1/datasets/{dataSetId}
```

## Description

Updates the Dataset entity having the specified datasetId.

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	dataSetId —	ID of the Dataset to be updated	integer (int32)
Body	body —		<a href="#">PayloadEnvelopeDataSetDTO</a>

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeDataSetDTO</a>

## Tags

- Datasets

## List all analyses in a dataset with given datasetId

```
GET /gobii/v1/datasets/{dataSetId}/analyses
```

## Description

Lists all the analysis in a dataset identified by dataset id.

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	datasetId —	ID of the dataset	integer (int32)

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeAnalysisDTO</a>

## Tags

- Datasets

## List all jobs for a dataset with datasetId

```
GET /gobii/v1/datasets/{datasetId}/jobs
```

## Description

List information for active job for a given datasetId

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	datasetId —	ID of the dataset	string

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeJobDTO</a>

## Create a new display

POST /gobii/v1/displays

### Description

Creates displays in GDM.

### Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Body	body —		<a href="#">PayloadEnvelopeDisplayDTO</a>

### Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeDisplayDTO</a>

## Tags

- Displays

## List all displays

GET /gobii/v1/displays

### Description

Lists all Displays in GDM

### Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeDisplayDTO</a>

## Tags

- Displays

## Get a display by displayId

```
GET /gobii/v1/displays/{displayId}
```

## Description

Get the Display by display Id

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	displayId —	ID of the Display to be extracted	integer (int32)

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeDisplayDTO</a>

## Tags

- Displays

## Update a display with displayId

```
PUT /gobii/v1/displays/{displayId}
```

## Description

Updates the Display entity having the specified displayId.

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	displayId —	ID of the Display to be updated	integer (int32)
Body	body —		<a href="#">PayloadEnvelopeDisplayDTO</a>

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeDisplayDTO</a>

## Tags

- Displays

## List all entities

```
GET /gobii/v1/entities
```

## Description

Lists all the existing entities in the system.

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeEntityStatsDTO</a>

## Tags

- Entities

## Get entity count for a given entity child

```
GET /gobii/v1/entities/{entityNameParent}/{parentId}/{entityNameChild}/count
```

### Description

Retrieves the total count of the children for the given entity

### Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	entityNameChild —	Name of the child entity	string
Path	entityNameParent —	Name of the parent entity	string
Path	parentId —	ID of the parent entity	integer (int32)

### Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeEntityStatsDTO</a>

## Tags

- Entities

## Get count for a given entity

```
GET /gobii/v1/entities/{entityName}/count
```

### Description

Gets the total Entity count for the given entityName

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token	Authentication Token	string
	—		
Path	entityName	Name of the Entity	string
	—		

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeEntityStatsDTO</a>

## Tags

- Entities

# Get last modified date of an entity

```
GET /gobii/v1/entities/{entityName}/lastmodified
```

## Description

Gets last modified Entity for the given entityName

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token	Authentication Token	string
	—		
Path	entityName	Name of the Entity	string
	—		

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeEntityStatsDTO</a>

## Tags

# Create a new experiment

POST /gobii/v1/experiments

## Description

Creates a new experiment in the system.

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Body	body —		<a href="#">PayloadEnvelopeExperimentDTO</a>

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeExperimentDTO</a>

## Tags

- Experiments

# List all experiments

GET /gobii/v1/experiments

## Description

List all the existing experiments in the system.

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeExperimentDTO</a>

## Tags

- Experiments

## Get a experiment by experimentId

```
GET /gobii/v1/experiments/{experimentId}
```

## Description

Gets the Experiment entity having the specified ID.

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	experimentId —	ID of the Experiment to be updated	integer (int32)

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeExperimentDTO</a>

## Tags

- Experiments

## Update an experiment by experimentId

```
PUT /gobii/v1/experiments/{experimentId}
```

## Description

Updates the Experiment entity having the specified experimentId.

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	experimentId —	ID of the Experiment to be updated	integer (int32)
Body	body —		<a href="#">PayloadEnvelopeExperimentDTO</a>

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeExperimentDTO</a>

## Tags

- Experiments

# List all protocols for a given experimentId

```
GET /gobii/v1/experiments/{experimentId}/protocols
```

## Description

Retrieves all the protocols having the specified experimentId in the system.

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	experimentId —	ID of the Experiment	integer (int32)

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeProtocolDTO</a>

## List of loader files in a given directory

```
GET /gobii/v1/files/loader/{directoryName}
```

### Description

Gets file preview for the specified directory name

### Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	directoryName —	Name of the directory	string
Query	fileFormat —	Format/Extension of the file	string

### Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeLoaderFilePreview DTO</a>

## Tags

- Files

## Add a loader file to given directory

```
PUT /gobii/v1/files/loader/{directoryName}
```

### Description

Updates a directory in the system that will be used for storing the data files for loading

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	directoryName —	Name of the directory/folder	string
Body	body —		<a href="#">PayloadEnvelopeLoaderFilePreviewDTO</a>

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeLoaderFilePreviewDTO</a>

## Tags

- Files

# Upload a file to given destination

```
POST /gobii/v1/files/{destinationType}
```

## Description

Uploads an arbitrary file to the specified destination

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	destinationType —	Destination type where the file will be uploaded to	string
Query	file —	The file to be uploaded	string
Query	fileName —	Name of the file to be uploaded	string

## Responses

HTTP Code	Description	Schema
200	successful operation	string

## Tags

- Files

# Delete a file by destination type

```
DELETE /gobii/v1/files/{destinationType}
```

## Description

Deletes an arbitrary file from the specified destination

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	destinationType —	Destination type where the file will be delete from	string
Query	fileName —	Name of the file to be deleted	string

## Responses

HTTP Code	Description	Schema
200	successful operation	string

## Produces

- `text/plain`

## Tags

- Files

# Upload a file for a given job and destination type

```
POST /gobii/v1/files/{gobiiJobId}/{destinationType}
```

## Description

Uploads the specified file for a specific job to the specified directory

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	destinationType —	Destination type where the file will be uploaded to	string
Path	gobiiJobId —	ID of the Job that the file will be associated to	string
Query	file —	The file to be uploaded	string
Query	fileName —	Name of the file	string

## Responses

HTTP Code	Description	Schema
200	successful operation	string

## Tags

- Files

# Download a job file from a given destination type

```
GET /gobii/v1/files/{gobiiJobId}/{destinationType}
```

## Description

Downloads the specified file for a specific job from the specified directory

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	destinationType —	Destination type where the file will be downloaded from	string
Path	gobiiJobId —	ID of the Job	string
Query	fileName —	Name of the file to be downloaded	string

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">InputStreamResource</a>

## Tags

- Files

# Create an extractor instruction file

```
POST /gobii/v1/instructions/extractor
```

## Description

Creates extractor instruction file and then submits a new Job.

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Body	body —		<a href="#">PayloadEnvelopeExtractorInstructionFileSDTO</a>

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeExtractorInstructionFilesDTO</a>

## Tags

- Instructions

## Get extractor job status by jobName

```
GET /gobii/v1/instructions/extractor/jobs/{jobName}
```

## Description

Retrieves the extract job status along with other job details having the specified Job Name.

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	jobName —	Name of the job	string

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeJobDTO</a>

## Tags

- Instructions

## Download an extractor instructor file

```
GET /gobii/v1/instructions/extractor/{instructionFileName}
```

## Description

Retrieves the extractor instruction file entity having the specified instruction file name.

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	instructionFileName —	Name of the instruction file to be retrieved	string

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeExtractorInstructionFilesDTO</a>

## Tags

- Instructions

# Create loader instruction file

POST /gobii/v1/instructions/loader

## Description

Creates loader instruction file and then submits a new Job.

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Body	body —		<a href="#">PayloadEnvelopeLoaderInstructionFilesDTO</a>

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeLoaderInstructionFilesDTO</a>

## Tags

- Instructions

## Get loader job status by job name

```
GET /gobii/v1/instructions/loader/jobs/{jobName}
```

### Description

Gets the loading job status along with other job details having the specified Job Name.

### Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	jobName —	Name of the job	string

### Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeJobDTO</a>

## Tags

- Instructions

## Get a loader instruction file

```
GET /gobii/v1/instructions/loader/{instructionFileName}
```

### Description

Gets the loader instruction file entity having the specified instruction file name.

### Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

Type	Name	Description	Schema
Path	instructionFile Name	Name of the instruction file to be retrieved.	string

## Responses

HTTP Code	Description	Schema

## Create a manifest

```
POST /gobii/v1/manifests
```

## Description

Creates a Manifest entity for GOBii system.

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Body	body —		<a href="#">PayloadEnvelopeManifestDTO</a>

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeManifestDTO</a>

## Tags

- Manifests

## List all manifests

```
GET /gobii/v1/manifests
```

## Description

Lists an unfiltered list of all Manifest entities.

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeManifestDTO</a>

## Tags

- Manifests

## Get manifests by manifestId

```
GET /gobii/v1/manifests/{manifestId}
```

## Description

Gets the Manifest entity having the specified ID.

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	manifestId —	ID of the Manifest to be retrieved	integer (int32)

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeManifestDTO</a>

## Tags

- Manifests

# Update a manifest

```
PUT /gobii/v1/manifests/{manifestId}
```

## Description

Updates the Manifest entity having the specified manifestId.

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	manifestId —	ID of the Manifest to be updated	integer (int32)
Body	body —		<a href="#">PayloadEnvelopeManifestDTO</a>

## Create a new NameID

```
POST /gobii/v1/names/{entity}
```

### Description

Retrieves a list of name/ID combination for a given entity and name list. For the list of entities supported see class GobiiEntityNameType. This service is specifically implemented for these filter types: NAMES\_BY\_NAME\_LIST - given a list of names, return the same list with the corresponding ID in the database. If name doesn't exist, ID will be 0. NAMES\_BY\_NAME\_LIST\_RETURN\_EXISTS - given a list of names, return the list of names with ID that exists in the

database.NAMES\_BY\_NAME\_LIST\_RETURN\_ABSENT - given a list of names, return the list of names that doesn't exist in the database with 0 as the IDFilter value varies per entity. This can be cv group name, project ID, platform ID, etc.Example use case: entity = CV; filterType = NAMES\_BY\_NAME\_LIST; filterValue = germplasm\_typeResult will be a list of CV terms with ID having germplasm\_type as the cv group

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	entity —	The entity to be retrieved	string
Query	filterType —	The filter type for the name list	string
Query	filterValue —	The value for the filter type	string
Body	body —		<a href="#">PayloadEnvelopeNameIdDTO</a>

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeNameIdDTO</a>

## Tags

- Names

## List all NameIds

```
GET /gobii/v1/names/{entity}
```

## Description

List of name/ID combination for a given entity. For the list of entities supported see class GobiiEntityType.List can further be filtered out by specifying the filter type and value.For the list of filter types supported see class GobiiFilterType.Example use case: entity = CV; filterType = NAMES\_BY\_TYPE\_NAME; filterValue = statusResult will be a list of CV terms having status as the cv group

## Parameters

Type	Name	Description	Schema
Header	X-Auth-Token —	Authentication Token	string
Path	entity —	The entity to be retrieved	string
Query	filterType —	The filter type for the name list	string
Query	filterValue —	The value for the filter type	string

## Responses

## /restprofiles/

PUT /gobii/v1/restprofiles

## Description

Update REST profiles When the Header of the payload envelope for a resource contains maxGet, maxPost, and maxPut values, this resource provides a means to update the max for a given rest resource ID and for a given HTTP verb. The values are transient in the sense that they will be confined only to a specific web service deployment. They are stored in the web service configurationdocument

## Parameters

Type	Name	Description	Schema
Header	<b>X-Auth-Token</b> —	Authentication Token	string
Body	<b>body</b> —		<a href="#">PayloadEnvelopeRestProfileDTO</a>

## Responses

HTTP Code	Description	Schema
200	successful operation	<a href="#">PayloadEnvelopeRestProfileDTO</a>

## Tags

## HeaderAuth

Name	Schema
<b>gobiiCropType</b> —	string

Name	Schema
<b>password</b> —	string
<b>token</b> —	string
<b>userName</b> —	string

## HeaderStatusMessage

Name	Schema
<b>gobiiStatusLevel</b> —	enum (ERROR, VALIDATION, WARNING, INFO, OK)
<b>gobiiValidationStatusType</b> —	enum (NONE, UNKNOWN, VALIDATION_COMPOUND_UNIQUE, VALIDATION_NOT_UNIQUE, NONEXISTENT_FK_ENTITY, BAD_REQUEST, MISSING_REQUIRED_VALUE, ENTITY_DOES_NOT_EXIST, ENTITY_ALREADY_EXISTS, UNKNOWN_ENUM_VALUE, RESOURCE_LIMIT)
<b>message</b> —	string

## InputStream

Type : object

## InputStreamResource

Name	Schema
<b>description</b> —	string
<b>file</b> —	file
<b>filename</b> —	string
<b>inputStream</b> —	<a href="#">InputStream</a>
<b>open</b> —	boolean
<b>readable</b> —	boolean
<b>uri</b> —	string (uri)

Name	Schema
<b>url</b> —	string (url)

## JobDTO

Name	Schema
<b>allowedProcessTypes</b> —	< enum (CREATE, READ, UPDATE, DELETE, NONE) > array
<b>datasetIds</b> —	< integer (int32) > array
<b>id</b> —	integer (int32)
<b>jobId</b> —	integer (int32)
<b>jobName</b> —	string
<b>message</b> —	string
<b>payloadType</b> —	string
<b>status</b> —	string
<b>submittedBy</b> —	integer (int32)
<b>submittedDate</b> —	string (date-time)
<b>type</b> —	string

## Link

Name	Schema
<b>description</b> —	string
<b>href</b> —	string
<b>methods</b> —	< enum (GET, POST, PUT, PATCH, DELETE, OPTIONS) > array

## LinkCollection

Name	Schema
<b>exploreLinksPerDataItem</b> —	< < <a href="#">Link</a> > array > array
<b>linksPerDataItem</b> —	< <a href="#">Link</a> > array

## LoaderFilePreviewDTO

Name	Schema
<b>allowedProcessTypes</b> —	< enum (CREATE, READ, UPDATE, DELETE, NONE) > array
<b>directoryName</b> —	string
<b>fileList</b> —	< string > array
<b>filePreview</b> —	< < string > array > array
<b>id</b> —	integer (int32)
<b>previewFileName</b> —	string

## LoaderInstructionFilesDTO

Name	Schema
<b>allowedProcessTypes</b> —	< enum (CREATE, READ, UPDATE, DELETE, NONE) > array
<b>gobiiLoaderInstructions</b> —	< <a href="#">GobiiLoaderInstruction</a> > array
<b>id</b> —	integer (int32)
<b>instructionFileName</b> —	string

## ManifestDTO

Name	Schema
<b>allowedProcessTypes</b> —	< enum (CREATE, READ, UPDATE, DELETE, NONE) > array
<b>code</b> —	string
<b>createdBy</b> —	integer (int32)

Name	Schema
<b>createdDate</b> —	string (date-time)
<b>entityNameType</b> —	enum (UNKNOWN, ANALYSIS, CONTACT, DATASET, CV, CVGROUP, PROJECT, ORGANIZATION, PLATFORM, MANIFEST, MAPSET, MARKER_GROUP, EXPERIMENT, REFERENCE, ROLE, DISPLAY, MARKER, PROTOCOL, VENDOR_PROTOCOL, DNASAMPLE, LINKAGE_GROUP, DNARUN, GERMPLASM, JOB)
<b>filePath</b> —	string
<b>id</b> —	integer (int32)
<b>manifestId</b> —	integer (int32)
<b>modifiedBy</b> —	integer (int32)
<b>modifiedDate</b> —	string (date-time)
<b>name</b> —	string

## MapsetDTO

Name	Schema
<b>allowedProcessTypes</b> —	< enum (CREATE, READ, UPDATE, DELETE, NONE) > array
<b>code</b> —	string
<b>createdBy</b> —	integer (int32)
<b>createdDate</b> —	string (date-time)
<b>description</b> —	string
<b>entityNameType</b> —	enum (UNKNOWN, ANALYSIS, CONTACT, DATASET, CV, CVGROUP, PROJECT, ORGANIZATION, PLATFORM, MANIFEST, MAPSET, MARKER_GROUP, EXPERIMENT, REFERENCE, ROLE, DISPLAY, MARKER, PROTOCOL, VENDOR_PROTOCOL, DNASAMPLE, LINKAGE_GROUP, DNARUN, GERMPLASM, JOB)
<b>id</b> —	integer (int32)

Name	Schema
<b>mapType</b> —	integer (int32)
<b>mapsetId</b> —	integer (int32)
<b>modifiedBy</b> —	integer (int32)
<b>modifiedDate</b> —	string (date-time)
<b>name</b> —	string
<b>properties</b> —	< <a href="#">EntityPropertyDTO</a> > array
<b>referenceId</b> —	integer (int32)
<b>statusId</b> —	integer (int32)

## MarkerDTO

Name	Schema
<b>allowedProcessTypes</b> —	< enum (CREATE, READ, UPDATE, DELETE, NONE) > array
<b>alts</b> —	< integer (int32) > array
<b>code</b> —	string
<b>id</b> —	integer (int32)
<b>markerId</b> —	integer (int32)
<b>markerName</b> —	string
<b>platformId</b> —	integer (int32)
<b>platformName</b> —	string
<b>ref</b> —	string
<b>referenceId</b> —	integer (int32)
<b>sequence</b> —	string

Name	Schema
<b>status</b> —	integer (int32)
<b>strand</b> —	integer (int32)
<b>strandId</b> —	integer (int32)
<b>variantId</b> —	integer (int32)

## MarkerGroupDTO

Name	Schema
<b>allowedProcessTypes</b> —	< enum (CREATE, READ, UPDATE, DELETE, NONE) > array
<b>code</b> —	string
<b>createdBy</b> —	integer (int32)
<b>createdDate</b> —	string (date-time)
<b>entityNameType</b> —	enum (UNKNOWN, ANALYSIS, CONTACT, DATASET, CV, CVGROUP, PROJECT, ORGANIZATION, PLATFORM, MANIFEST, MAPSET, MARKER_GROUP, EXPERIMENT, REFERENCE, ROLE, DISPLAY, MARKER, PROTOCOL, VENDOR_PROTOCOL, DNASAMPLE, LINKAGE_GROUP, DNARUN, GERMPLASM, JOB)
<b>germplasmGroup</b> —	string
<b>id</b> —	integer (int32)
<b>markerGroupId</b> —	integer (int32)
<b>markerMap</b> —	< string, < string > array > map
<b>markers</b> —	< <a href="#">MarkerGroupMarkerDTO</a> > array
<b>modifiedBy</b> —	integer (int32)
<b>modifiedDate</b> —	string (date-time)
<b>name</b> —	string

Name	Schema
<b>statusId</b> —	integer (int32)

## MarkerGroupMarkerDTO

Name	Schema
<b>favorableAllele</b> —	string
<b>gobiiProcessType</b> —	enum (CREATE, READ, UPDATE, DELETE, NONE)
<b>markerExists</b> —	boolean
<b>markerId</b> —	integer (int32)
<b>markerName</b> —	string
<b>platformId</b> —	integer (int32)
<b>platformName</b> —	string

## NameIdDTO

Name	Schema
<b>allowedProcessTypes</b> —	< enum (CREATE, READ, UPDATE, DELETE, NONE) > array
<b>entityLasetModified</b> —	string (date-time)
<b>fkId</b> —	integer (int32)
<b>gobiiEntityNameType</b> —	enum (UNKNOWN, ANALYSIS, CONTACT, DATASET, CV, CVGROUP, PROJECT, ORGANIZATION, PLATFORM, MANIFEST, MAPSET, MARKER_GROUP, EXPERIMENT, REFERENCE, ROLE, DISPLAY, MARKER, PROTOCOL, VENDOR_PROTOCOL, DNASAMPLE, LINKAGE_GROUP, DNARUN, GERMPLASM, JOB)
<b>gobiiFkEntityNameType</b> —	enum (UNKNOWN, ANALYSIS, CONTACT, DATASET, CV, CVGROUP, PROJECT, ORGANIZATION, PLATFORM, MANIFEST, MAPSET, MARKER_GROUP, EXPERIMENT, REFERENCE, ROLE, DISPLAY, MARKER, PROTOCOL, VENDOR_PROTOCOL, DNASAMPLE, LINKAGE_GROUP, DNARUN, GERMPLASM, JOB)

Name	Schema
<b>id</b> —	integer (int32)
<b>name</b> —	string
<b>parameters</b> —	< string, object > map

## OrganizationDTO

Name	Schema
<b>address</b> —	string
<b>allowedProcessTypes</b> —	< enum (CREATE, READ, UPDATE, DELETE, NONE) > array
<b>createdBy</b> —	integer (int32)
<b>createdDate</b> —	string (date-time)
<b>entityNameType</b> —	enum (UNKNOWN, ANALYSIS, CONTACT, DATASET, CV, CVGROUP, PROJECT, ORGANIZATION, PLATFORM, MANIFEST, MAPSET, MARKER_GROUP, EXPERIMENT, REFERENCE, ROLE, DISPLAY, MARKER, PROTOCOL, VENDOR_PROTOCOL, DNASAMPLE, LINKAGE_GROUP, DNARUN, GERMPLASM, JOB)
<b>id</b> —	integer (int32)
<b>modifiedBy</b> —	integer (int32)
<b>modifiedDate</b> —	string (date-time)
<b>name</b> —	string
<b>organizationId</b> —	integer (int32)
<b>statusId</b> —	integer (int32)
<b>vendorProtocols</b> —	< <a href="#">VendorProtocolDTO</a> > array
<b>website</b> —	string

## Pagination

Name	Schema
<b>currentPage</b> —	integer (int32)
<b>pageSize</b> —	integer (int32)
<b>pagedQueryId</b> —	string
<b>queryTime</b> —	string (date-time)
<b>totalPages</b> —	integer (int32)

## Payload

Name	Schema
<b>data</b> —	< object > array
<b>linkCollection</b> —	<a href="#">LinkCollection</a>

## PayloadAnalysisDTO

Name	Schema
<b>data</b> —	< <a href="#">AnalysisDTO</a> > array
